

HYDRAULIC PROPORTIONING SYSTEM

ABSTRACT OF DISCLOSURE

An hydraulic proportioning system having a fluid actuated motor with a driven
5 motor shaft, the motor being in fluid communication with and powered by a fluid source. A pump
is provided having a drive shaft driven by the driven motor shaft of the fluid actuated motor, and
a drive clutch interconnecting the driven motor shaft and the drive shaft of the pump. An injector
manifold is in fluid communication with the pump which is connectable to a chemical source. A
tube is in fluid communication with the injector manifold and extends into a chamber having fluid
10 communication with the fluid source, the chemical and fluid from the fluid source combining in the
chamber and discharged therefrom.
